

Agentic AI for HR

Reduce HR administration with Copilot and governed agents—returning time to faster service, better decisions and strategic people work.

2 days / 16 hours • HRS-HRM-4031-1.1

Trainer: Dr. Alfred Ang | Version 6.2 | 16 August 2026

Tertiary Infotech Academy Pte Ltd | UEN 201200696W

COURSE ADMINISTRATION

Welcome & Housekeeping

Digital Attendance (Mandatory)

TRAQOM · SSG DIGITAL ATTENDANCE

- It is mandatory to take the AM, PM and Assessment digital attendance for WSQ-funded courses.
- The trainer or administrator displays the digital-attendance QR code from the SSG portal.
- Scan the QR code with your mobile phone camera and submit your attendance.
- A minimum of 75% attendance is required to be eligible for assessment and funding.

About the Trainer

About the Trainer

YOUR TRAINER

Dr. Alfred Ang

Principal Trainer
Tertiary Infotech Academy Pte Ltd

ROLE

Principal Trainer, Tertiary Infotech Academy Pte Ltd

BACKGROUND

PhD · 20+ years of industry and training experience in business, technology, analytics and AI.

DELIVERS

WSQ professional development in AI transformation, data analytics and responsible adoption.

FOUNDER

Founder and lead instructor at Tertiary Infotech / Tertiary Courses.

Let's Know Each Other

ICE-BREAKER

- Your name and organisation or HR role.
- Your experience with Microsoft 365 Copilot, Copilot Studio or HR automation, if any.
- One HR process you would like to improve with generative or agentic AI.

Ground Rules

HOUSEKEEPING

1

Set your mobile phone to silent mode.

2

Participate actively — no question is too small.

3

Mutual respect: agree to disagree.

4

One conversation at a time.

5

Be punctual; return from breaks on time.

6

Use synthetic data only; protect personal information.

Assessment Submission ↗

1

Sign in

Use your registered email and OTP or password.

2

Open your course

Select Agentic AI for HR under My Courses.

3

Download materials

Keep the slides and Learner Guide for open-book assessment.

4

Submit work

Upload assessment answers and complete required attendance.

Your HR AI Workbench

COURSE TOOLS · ALL 12 ACTIVITIES

GENERATIVE AI

Microsoft 365 Copilot

AGENTIC AI

**Agent Builder in
Microsoft 365 Copilot**

**Microsoft
Copilot Studio**

Create with Copilot · orchestrate with agents · govern with human review

1

Use synthetic cases

Start from the supplied activity records.

2

Create or analyse

Use Microsoft 365 Copilot with approved context.

3

Build bounded agents

Use Agent Builder or Copilot Studio for governed workflows.

4

Test and evidence

Save prompts, checks, revisions and human approvals.

Lesson Plan — 2 Days, 9:00am–6:00pm

SCHEDULE

DAY 1 · FRAME & GENERATE

- Welcome, pain points and assessment briefing
- Unit 1 · From Generative AI to Agentic HR
- Activities 1–3 · Talent need, JD and resume screening
- Unit 2 · Microsoft 365 Copilot across HR
- **Activities 4–6 · Interview, onboarding and development**

DAY 2 · ORCHESTRATE & GOVERN

- Retrieval practice and Unit 3 · Governed HR agents
- Activities 7–9 · Policy, leave and benefits agents
- Unit 4 · Responsible adoption and operations
- Activities 10–12 · Wellness, offboarding and control room
- **4:00–6:00pm · WA then Case Study Assessment**

Skills Framework — Human Resource Digitalisation

WSQ ALIGNMENT

TSC element	Detail
TSC Title / Code	Human Resource Digitalisation-4 (HRS-HRM-4031-1.1)
Knowledge	Generative AI, agentic AI and HR digitalisation
Application	Use-case analysis, feasibility, agent design and responsible controls
Evidence	Prompts, outputs, checks, decisions and audit trail

Every unit, activity and assessment item maps to this TSC through observable evidence.

Learning Outcomes

BY THE END OF THIS COURSE

1

LO1

Compare how generative and agentic AI reshape HR operating models versus conventional HR delivery.

2

LO2

Analyse where Microsoft 365 Copilot and AI agents can improve end-to-end HR processes and employee experience.

3

LO3

Conduct feasibility analysis and design a governed implementation for an HR generative-AI or agentic-AI use case.

4

LO4

Apply legal, ethical, privacy, security, fairness and human-oversight controls to AI-enabled HR work.

Course Outline — Four Learning Units

THE JOURNEY

01 From Generative AI to Agentic HR

Choose the lightest capability that safely solves the work

02 Microsoft 365 Copilot Across the HR Lifecycle

Generate and analyse with a human in control

03 Build Governed HR Agents

Agent Builder for knowledge; Copilot Studio for orchestration

04 Responsible Adoption and HR Transformation

Govern decisions, data, people and agent operations

Briefing for Assessment

READINESS · PRACTICE · CONFIDENTIALITY

ASSESSMENT READINESS

- 01 Know the instruments** Written Assessment and Case Study; 60 minutes each; open book.
- 02 Protect the assessment** Work individually. Do not photograph, record, discuss or share assessment content.
- 03 Submit complete evidence** Answer every part, protect personal data and follow the assessor's LMS instructions.

PRACTICE EXAM ACCESS

Build confidence before assessment

exams.tertiaryinfotech.com

Use the practice platform only for preparation. The actual WSQ assessment remains on the LMS and follows the assessor's instructions.

Practice does not replace the official assessment.

Final Assessment

FINAL ASSESSMENT

- Written Assessment — five open-response questions mapped to K1–K5, 60 minutes, open book.
- Case Study Assessment — five applied questions mapped to A1–A5, 60 minutes, open book.
- Take the Assessment digital attendance and submit answers on the LMS.
- At least 75% attendance and a Competent result are required for funding eligibility.
- An appeal process is available if you disagree with the assessment outcome.

Assessment Flow

ON ASSESSMENT DAY

From Generative AI to Agentic HR

Choose the lightest capability that safely solves the work

FRAME

GENERATE

ORCHESTRATE

GOVERN

Concepts → evidence → activity → reflection

Today's HR operating pain

Fragmented channels and repeated hand-offs trap HR capacity in administration.

01

Requests arrive through email, forms and chat with no shared case view

02

HR rekeys the same data across trackers, documents and systems

03

Employees and managers wait for inconsistent answers and approvals

04

Evidence, ownership and exceptions are difficult to trace

The strategic case for HR AI

Automate routine work so HR can deliver faster service and more strategic value.

Design question • What evidence would make this safe enough for HR work?

Why now: the people and AI agendas converge

HR must build internal capability while helping the enterprise navigate AI disruption.

01 **79% of surveyed leaders expected GenAI to substantially transform their organisation or industry**

02 **72% expected GenAI to change talent strategies**

03 **Only 23% reported GenAI investment in HR in the cited study**

04 **81% said business and people agendas had never been more intertwined**

The HR AI continuum

Automation follows rules; copilots create; agents pursue bounded goals.

- 1 Rules automate predictable hand-offs**
- 2 Microsoft 365 Copilot drafts, summarises and analyses**
- 3 Agents reason, plan, use tools and act**
- 4 Humans retain accountability**

Human accountability remains visible at every layer.

Four shifts in HR work

AI value moves from efficiency to new human and enterprise value.

Design question • What evidence would make this safe enough for HR work?

HR's own AI evolution

HR moves incrementally from AI-assisted to AI-augmented and AI-powered work.

- 1 AI-assisted: humans own the work with moderate AI support**
- 2 AI-augmented: people and AI collaborate with frequent hand-offs**
- 3 AI-powered: AI handles bounded work while people monitor and improve**
- 4 Fully autonomous HR remains rare; human accountability endures**

Human accountability remains visible at every layer.

Conventional HR operating model

Queues and hand-offs make service slow and opaque.

**Requests arrive through
email and forms**

**Queues and hand-offs make
service slow and opaque.**

**Specialists search
systems manually**

**Approvals cross
organisational
boundaries**

**Evidence is scattered
across tools**

Copilot-assisted HR operating model

A human remains the operator while Copilot accelerates knowledge work.

1 Ground prompts in approved work content

2 Generate a first draft, not a final decision

3 Compare and refine with domain expertise

4 Record source and reviewer

Human accountability remains visible at every layer.

Agent-enabled HR operating model

An agent can coordinate a bounded workflow across systems.

Design question • What evidence would make this safe enough for HR work?

Assistant, agent or workflow?

Use the simplest lever that meets the outcome and risk profile.

01

**Copilot: create or analyse
with a person**

02

**Agent: converse, reason and
orchestrate**

03

**Flow: deterministic
transaction**

04

**Hybrid: agent front door plus
governed flow**

The Microsoft HR AI stack

Microsoft 365 Copilot and Copilot Studio play different but complementary roles.

**Word and Outlook:
content and
communication**

**Microsoft 365 Copilot and
Copilot Studio play different
but complementary roles.**

**Excel: evidence and
analysis**

**Teams and SharePoint:
collaboration and
knowledge**

**Copilot Studio: agents,
tools, flows and channels**

AI-powered HR operating model

An AI and data core needs strategy, product, engineering, insight and people-operations capabilities around it.

**HR strategy, governance
and portfolio
management set value
and risk priorities**

**An AI and data core needs
strategy, product,
engineering, insight and
people-operations
capabilities around it.**

**Workforce solution
architects and an
innovation hub design
human-centred services**

**Solution DevOps and
sustainment operate
agents, integrations and
controls**

**People operations and
workforce engagement
keep employee outcomes
visible**

Agent anatomy

Reliable agents need a goal, knowledge, instructions, tools, boundaries and tests.

Design question • What evidence would make this safe enough for HR work?

HR lifecycle opportunity map

AI value appears across attract, join, grow, serve and exit.

01

**Attract: workforce planning
and recruitment**

02

Join: onboarding and access

03

**Grow: performance, learning
and mobility**

04

**Serve and exit: policy, leave,
cases and offboarding**

Value without losing the human

Saved time should be redirected to judgement, coaching and care.

**Reduce repetitive search
and drafting**

**Saved time should be
redirected to judgement,
coaching and care.**

**Improve access and
consistency**

**Create capacity for
human conversations**

**Do not automate
empathy or
accountability**

Use-case selection

Start with frequent, bounded and measurable work.

- 1 High volume and clear policy**
- 2 Reliable knowledge and integrations**
- 3 Reversible actions and escalation**
- 4 A KPI baseline and accountable owner**

Human accountability remains visible at every layer.

Feasibility lens

A good idea is not yet a deployable use case.

Design question • What evidence would make this safe enough for HR work?

From pilot to operating capability

A pilot must prove usefulness, control and adoption together.

01

Define baseline and success threshold

02

Use synthetic data before live data

03

Test normal, edge and adversarial cases

04

Assign monitoring, review and retirement

Activity 1: Assess Talent Needs with Copilot

Use Microsoft 365 Copilot to turn operational evidence into a transparent hire, redeploy or develop recommendation.

CASE

HarbourLight Logistics SG is opening a digitally enabled distribution hub. HR receives demand forecasts, overtime data, vacancy history and a skills inventory in separate files, so workforce decisions are slow and reactive.

TOOLS

- Excel with Microsoft 365 Copilot
- Teams

OUTPUTS

- Talent-demand evidence map
- Skills-gap analysis
- Hire-redeploy-develop recommendation

GUARDRAILS

- Cite the supplied cells and records
- Separate fact from forecast
- Business and HR owners approve the demand hypothesis

Detailed procedure, prompts and evidence checklist: Learner Guide + activity folder

Activity 1 success map

Show your reasoning—not only a polished output.

INPUT

**Use the supplied
synthetic case
and approved
sources**

✓ reviewable

DECISION

**State
assumptions,
criteria and the
human owner**

✓ reviewable

EVIDENCE

**Save prompts,
output, checks,
revisions and
approvals**

✓ reviewable

QUALITY

**Pass the
acceptance
criteria and
answer reflection
questions**

✓ reviewable

Stop if the agent or Copilot output cannot be traced, corrected or safely escalated.

Activity 2: Draft an Inclusive Job Description with Generative AI

Use Word Copilot to draft a skills-based, inclusive and approval-ready job description grounded in the approved talent need.

CASE

Activity 1 established a need for a Workforce Operations Analyst. The old JD is task-heavy, contains copied requirements and does not reflect the outcomes or skills needed at the new hub.

TOOLS

- Word with Microsoft 365 Copilot
- Excel

OUTPUTS

- Role-outcome map
- Inclusive job description
- Hiring-manager validation checklist

GUARDRAILS

- Use job-related criteria only
- Distinguish essential from trainable skills
- Hiring manager and HR approve every requirement

Detailed procedure, prompts and evidence checklist: Learner Guide + activity folder

Activity 2 success map

Show your reasoning—not only a polished output.

INPUT

**Use the supplied
synthetic case
and approved
sources**

✓ reviewable

DECISION

**State
assumptions,
criteria and the
human owner**

✓ reviewable

EVIDENCE

**Save prompts,
output, checks,
revisions and
approvals**

✓ reviewable

QUALITY

**Pass the
acceptance
criteria and
answer reflection
questions**

✓ reviewable

Stop if the agent or Copilot output cannot be traced, corrected or safely escalated.

Activity 3: Screen Resumes with a Fair Evidence Matrix

Use Microsoft 365 Copilot to extract job-related evidence at speed while keeping shortlist decisions human, traceable and reviewable.

CASE

Six synthetic candidates apply for the Workforce Operations Analyst role from Activity 2. Recruiters currently scan resumes inconsistently and retype evidence into spreadsheets.

TOOLS

- Excel with Microsoft 365 Copilot
- Word

OUTPUTS

- Candidate evidence matrix
- Uncertainty and bias log
- Human shortlist rationale

GUARDRAILS

- Synthetic resumes only
- Protected attributes and proxies excluded
- AI may organise evidence but cannot reject a candidate

Detailed procedure, prompts and evidence checklist: Learner Guide + activity folder

Activity 3 success map

Show your reasoning—not only a polished output.

INPUT

**Use the supplied
synthetic case
and approved
sources**

✓ reviewable

DECISION

**State
assumptions,
criteria and the
human owner**

✓ reviewable

EVIDENCE

**Save prompts,
output, checks,
revisions and
approvals**

✓ reviewable

QUALITY

**Pass the
acceptance
criteria and
answer reflection
questions**

✓ reviewable

Stop if the agent or Copilot output cannot be traced, corrected or safely escalated.

Unit 1 integration

Connect concept, evidence and action

01 Key decision

Choose the lightest capability that safely solves the work

02 Evidence

What would make the recommendation reviewable?

03 Human role

Who remains accountable?

04 Next move

What will you test or change?

Microsoft 365 Copilot Across the HR Lifecycle

Generate and analyse with a human in control

FRAME

GENERATE

ORCHESTRATE

GOVERN

Concepts → evidence → activity → reflection

A grounded prompt pattern

Context plus task plus constraints plus evidence produces reviewable work.

Design question • What evidence would make this safe enough for HR work?

Workforce planning

Copilot can turn fragmented evidence into an explainable workforce hypothesis.

01

Summarise demand signals

02

Identify capability gaps

03

Draft role and capacity options

04

Keep assumptions visible for challenge

Job design

Better job descriptions start with outcomes and skills, not copied history.

**Translate business need
into outcomes**

**Better job descriptions start
with outcomes and skills, not
copied history.**

**Separate essential from
trainable skills**

**Use inclusive, job-related
language**

**Validate with hiring
manager and policy**

Recruitment campaign

Copilot can adapt one approved proposition across channels without changing facts.

1 Candidate persona and value proposition

2 Channel-specific message

3 Consistent salary and requirements

4 Human approval before publication

Human accountability remains visible at every layer.

Resume screening

AI should organise job-related evidence—not make an opaque hiring decision.

Design question • What evidence would make this safe enough for HR work?

Structured interviewing

A shared evidence model improves consistency more than clever questions alone.

01

Behavioural questions tied to outcomes

02

Anchored scoring guide

03

Independent notes before consensus

04

Candidate accessibility and fairness checks

Candidate communication

Copilot can make communication timely, consistent and humane.

**Personalise only from
approved facts**

**Copilot can make
communication timely,
consistent and humane.**

**Avoid inferred sensitive
attributes**

Give realistic next steps

**Review tone, accuracy
and confidentiality**

Policy drafting

Copilot accelerates comparison and drafting; policy owners approve meaning.

- 1 Ground in current policy sources**
- 2 Surface conflicts and missing definitions**
- 3 Use plain-language examples**
- 4 Preserve version, approver and effective date**

Human accountability remains visible at every layer.

Onboarding

A personalised journey connects role, people, policy, systems and learning.

Design question • What evidence would make this safe enough for HR work?

Personalisation across the employee journey

AI can tailor support when personalisation is grounded, explainable and correctable.

01

Onboarding adapts approved tasks to role and location

02

Learning recommendations connect evidenced gaps to approved resources

03

Internal mobility surfaces explainable options rather than deterministic rankings

04

Employee-service agents answer routine questions and escalate personal exceptions

Predictive talent analytics with guardrails

Forecasts should guide questions and planning, not make hidden decisions about people.

- 1 Anticipate staffing needs from demand and skills evidence**
- 2 Identify organisational retention and capability patterns**
- 3 Test data quality, proxies, drift and uncertainty**
- 4 Keep high-potential, performance and wellbeing decisions human and contestable**

Human accountability remains visible at every layer.

Performance and development

Copilot can organise evidence and coaching preparation without replacing the conversation.

1 Summarise agreed goals and evidence

2 Separate observation from inference

3 Draft balanced coaching questions

4 Manager validates before discussion

Human accountability remains visible at every layer.

Learning and internal mobility

Skills intelligence becomes useful when employees can challenge and update it.

Design question • What evidence would make this safe enough for HR work?

Engagement and workforce insights

Patterns guide questions; they do not diagnose individuals.

01

Aggregate data to protect privacy

02

Triangulate survey, service and retention signals

03

Show uncertainty and limitations

04

Convert insight into a human-led action

Activity 4: Prepare and Review Structured Interviews with AI

Use Copilot to prepare job-related structured questions, organise synthetic interview notes and support a human panel decision.

CASE

The recruiter shortlisted three candidates in Activity 3. Managers currently improvise interview questions, take incomplete notes and struggle to compare evidence consistently.

TOOLS

- Word and Teams with Microsoft 365 Copilot
- Excel

OUTPUTS

- Structured interview guide
- Anchored panel scorecard
- Candidate communication pack

GUARDRAILS

- Same core questions for every candidate
- No emotion or personality inference
- Panel members score independently before consensus

Detailed procedure, prompts and evidence checklist: Learner Guide + activity folder

Activity 4 success map

Show your reasoning—not only a polished output.

INPUT

**Use the supplied
synthetic case
and approved
sources**

✓ reviewable

DECISION

**State
assumptions,
criteria and the
human owner**

✓ reviewable

EVIDENCE

**Save prompts,
output, checks,
revisions and
approvals**

✓ reviewable

QUALITY

**Pass the
acceptance
criteria and
answer reflection
questions**

✓ reviewable

Stop if the agent or Copilot output cannot be traced, corrected or safely escalated.

Activity 5: Automate Onboarding Coordination

Design a Copilot Studio onboarding agent that coordinates routine work while retaining accountable task owners and human confirmation.

CASE

A selected synthetic candidate joins HarbourLight as the Workforce Operations Analyst. Equipment, access, safety training and manager check-ins are currently coordinated through emails and spreadsheets, causing missed tasks and repeated follow-up.

TOOLS

- Microsoft Copilot Studio
- Teams
- SharePoint
- Power Automate or agent flows

OUTPUTS

- 30-day journey
- Agent conversation and tool map
- Onboarding test report

GUARDRAILS

- Use approved role and policy data
- Least-privilege connectors
- A human owner confirms every completion

Detailed procedure, prompts and evidence checklist: Learner Guide + activity folder

Activity 5 success map

Show your reasoning—not only a polished output.

INPUT

**Use the supplied
synthetic case
and approved
sources**

✓ reviewable

DECISION

**State
assumptions,
criteria and the
human owner**

✓ reviewable

EVIDENCE

**Save prompts,
output, checks,
revisions and
approvals**

✓ reviewable

QUALITY

**Pass the
acceptance
criteria and
answer reflection
questions**

✓ reviewable

Stop if the agent or Copilot output cannot be traced, corrected or safely escalated.

Activity 6: Create a Personalised Talent Development Journey

Use Copilot and a bounded development agent to identify evidence-based skill gaps, prepare learning options and automate routine follow-up.

CASE

After onboarding, the new analyst and two existing employees need different development pathways. HR currently assembles courses manually and managers lack a consistent skills-conversation structure.

TOOLS

- Microsoft 365 Copilot in Word and Teams
- Agent Builder in Microsoft 365 Copilot
- Excel

OUTPUTS

- Skills evidence summary
- 90-day development plan
- Development-agent instructions and tests

GUARDRAILS

- Employee can correct the skills record
- No deterministic potential ranking
- Manager and employee choose the final plan

Detailed procedure, prompts and evidence checklist: Learner Guide + activity folder

Activity 6 success map

Show your reasoning—not only a polished output.

INPUT

**Use the supplied
synthetic case
and approved
sources**

✓ reviewable

DECISION

**State
assumptions,
criteria and the
human owner**

✓ reviewable

EVIDENCE

**Save prompts,
output, checks,
revisions and
approvals**

✓ reviewable

QUALITY

**Pass the
acceptance
criteria and
answer reflection
questions**

✓ reviewable

Stop if the agent or Copilot output cannot be traced, corrected or safely escalated.

Unit 2 integration

Connect concept, evidence and action

01 Key decision

Generate and analyse with a human in control

02 Evidence

What would make the recommendation reviewable?

03 Human role

Who remains accountable?

04 Next move

What will you test or change?

Build Governed HR Agents

Agent Builder for knowledge; Copilot Studio for orchestration

FRAME

GENERATE

ORCHESTRATE

GOVERN

Concepts → evidence → activity → reflection

Choose the build surface

Agent Builder is fast for team knowledge; Copilot Studio supports broader orchestration.

Design question • What evidence would make this safe enough for HR work?

Agent Builder pattern

A useful team agent has a narrow purpose and authoritative knowledge.

01

Name the audience and task

02

Ground in selected SharePoint sources

03

Add response and refusal instructions

04

Share only with intended users

Copilot Studio pattern

An enterprise agent separates conversation, reasoning and transaction.

**Topic or generative
orchestration**

**An enterprise agent
separates conversation,
reasoning and transaction.**

**Approved knowledge
sources**

Actions and connectors

**Authentication, analytics
and ALM**

Integrate with the HR technology stack

Agents become useful when identity, HRIS data, workflows and monitoring are deliberately connected.

01

HRIS and policy repositories remain authoritative systems of record

02

Identity and permissions restrict personal data and transactions

03

Connectors and APIs expose only bounded, validated actions

04

Logging, fallback and human support make failures recoverable

Knowledge grounding

The answer should be traceable to the current approved source.

Design question • What evidence would make this safe enough for HR work?

Instructions and boundaries

Agent instructions are an operating policy, not marketing copy.

01

Define in-scope intents

02

State prohibited decisions

03

Specify clarification and escalation

04

Require confirmation before consequential actions

Tools and agent flows

Tools convert a conversation into work; flows make critical actions deterministic.

Use least-privilege connectors

Tools convert a conversation into work; flows make critical actions deterministic.

Validate inputs before action

Add human approval for consequential steps

Write outcome and error to an audit log

HR policy agent

A policy agent should answer, cite, qualify and escalate.

- 1 Recognise the employee intent**
- 2 Retrieve the exact current clause**
- 3 Explain in plain language**
- 4 Escalate ambiguity or personal exceptions**

Human accountability remains visible at every layer.

Onboarding agent

An onboarding agent coordinates milestones without inventing employment commitments.

Design question • What evidence would make this safe enough for HR work?

Leave agent

The agent gathers intent; a governed workflow validates and records the request.

01

Check balance and policy eligibility

02

Confirm dates and coverage

03

Route manager approval

04

Update system and notify with audit evidence

Benefits, payroll and case triage

Self-service is valuable when the agent knows when not to answer.

Handle common policy questions

Self-service is valuable when the agent knows when not to answer.

Retrieve authorised personal status

Never expose another employee's data

Escalate disputed or sensitive cases

Offboarding agent

Offboarding requires coordination, access control and respectful communication.

- 1 Confirm final date and obligations**
- 2 Trigger asset and access tasks**
- 3 Capture knowledge-transfer evidence**
- 4 Close only after owner confirmations**

Human accountability remains visible at every layer.

Agent testing

Test conversations, actions, permissions and recovery—not only happy-path answers.

Design question • What evidence would make this safe enough for HR work?

Activity 7: Draft and Operate an HR Policy Agent

Use Word Copilot to reconcile a controlled policy draft, then build an Agent Builder policy Q&A agent that cites the approved version.

CASE

Hybrid-work and conduct guidance exists in conflicting files. HR repeatedly answers the same questions and managers sometimes apply outdated rules.

TOOLS

- Word with Microsoft 365 Copilot
- Agent Builder in Microsoft 365 Copilot
- SharePoint
- Teams

OUTPUTS

- Conflict register and policy draft
- Agent instructions and knowledge map
- 12-case test report

GUARDRAILS

- Policy owner approves meaning
- Answers cite effective policy
- Ambiguous and sensitive cases escalate

Detailed procedure, prompts and evidence checklist: Learner Guide + activity folder

Activity 7 success map

Show your reasoning—not only a polished output.

INPUT

**Use the supplied
synthetic case
and approved
sources**

✓ reviewable

DECISION

**State
assumptions,
criteria and the
human owner**

✓ reviewable

EVIDENCE

**Save prompts,
output, checks,
revisions and
approvals**

✓ reviewable

QUALITY

**Pass the
acceptance
criteria and
answer reflection
questions**

✓ reviewable

Stop if the agent or Copilot output cannot be traced, corrected or safely escalated.

Activity 8: Automate Leave Application and Approval

Build a Copilot Studio leave agent plus deterministic approval flow for validation, confirmation, update and notification.

CASE

Employees message leave dates to HR, which rekeys requests into a tracker and follows up with managers. Balance errors, overlaps and duplicate submissions create avoidable administration.

TOOLS

- Microsoft Copilot Studio
- Agent flows or Power Automate
- Teams
- Excel or HRIS sandbox

OUTPUTS

- Agent instructions
- Leave approval flow
- Audit log and exception test report

GUARDRAILS

- Employee confirms before submission
- Manager owns exceptions
- Idempotency prevents duplicate actions

Detailed procedure, prompts and evidence checklist: Learner Guide + activity folder

Activity 8 success map

Show your reasoning—not only a polished output.

INPUT

**Use the supplied
synthetic case
and approved
sources**

✓ reviewable

DECISION

**State
assumptions,
criteria and the
human owner**

✓ reviewable

EVIDENCE

**Save prompts,
output, checks,
revisions and
approvals**

✓ reviewable

QUALITY

**Pass the
acceptance
criteria and
answer reflection
questions**

✓ reviewable

Stop if the agent or Copilot output cannot be traced, corrected or safely escalated.

Activity 9: Build a Benefits Self-Service Agent

Design a benefits agent that answers grounded general questions, retrieves authorised status and escalates consequential or sensitive cases.

CASE

HR answers repetitive benefits questions by email and manually checks plan documents. Employees need fast information, but personal eligibility and claims require authenticated data and specialist review.

TOOLS

- Microsoft Copilot Studio
- SharePoint
- Teams
- HRIS sandbox or mock connector

OUTPUTS

- Benefits intent-and-risk catalogue
- Knowledge and tool design
- Privacy and regression test report

GUARDRAILS

- General answers cite approved plan documents
- Personal requests require authentication
- No medical, legal or final entitlement advice

Detailed procedure, prompts and evidence checklist: Learner Guide + activity folder

Activity 9 success map

Show your reasoning—not only a polished output.

INPUT

**Use the supplied
synthetic case
and approved
sources**

✓ reviewable

DECISION

**State
assumptions,
criteria and the
human owner**

✓ reviewable

EVIDENCE

**Save prompts,
output, checks,
revisions and
approvals**

✓ reviewable

QUALITY

**Pass the
acceptance
criteria and
answer reflection
questions**

✓ reviewable

Stop if the agent or Copilot output cannot be traced, corrected or safely escalated.

Unit 3 integration

Connect concept, evidence and action

01 Key decision

Agent Builder for knowledge; Copilot Studio for orchestration

02 Evidence

What would make the recommendation reviewable?

03 Human role

Who remains accountable?

04 Next move

What will you test or change?

LEARNING UNIT 4

Responsible Adoption and HR Transformation

Govern decisions, data, people and agent operations

FRAME

GENERATE

ORCHESTRATE

GOVERN

Concepts → evidence → activity → reflection

Why HR AI is high consequence

Employment decisions affect opportunity, income, dignity and trust.

Design question • What evidence would make this safe enough for HR work?

Human involvement by impact

More consequential and less reversible decisions need stronger human authority.

01

Inform: AI drafts or retrieves

02

Recommend: AI proposes with evidence

03

Approve: authorised human decides

04

Execute: agent acts only within approved bounds

From HR efficiency to enterprise value

The strongest human-AI partnerships deliver better workforce solutions, speed and business impact.

01

Workforce solutions become more personalised and responsive

02

Agile portfolio management reduces time from need to usable service

03

Administrative capacity shifts to strategic and business-facing work

04

AI and technology fluency becomes a capability across HR, not an HRIS silo

Four implementation case vignettes

The supplied ebook illustrates value across recruitment, engagement, talent and performance.

01

Technology: screening and candidate chat; reported 30% faster hiring

02

Retail: feedback analysis; reported 20% lower turnover

03

Financial services: predictive talent and succession development

04

Healthcare: timely evidence for coaching and reviews

What successful implementations share

Technology works when objectives, people, monitoring and cross-functional ownership reinforce one another.

Design question • What evidence would make this safe enough for HR work?

Privacy by design

Minimise data before asking a model to protect it.

01

Purpose and lawful use

02

Minimum necessary fields

03

**Access, retention and
deletion**

04

**Incident and data-subject
response**

Fair hiring controls

Selection criteria must remain job-related, reviewable and consistently applied.

**Fairly consider
candidates**

**Selection criteria must
remain job-related,
reviewable and consistently
applied.**

**Exclude non-job-related
protected traits**

**Keep interview and
decision evidence**

**Provide human challenge
and correction**

Bias is a system property

Bias can enter through objectives, data, prompts, tools and human use.

- 1 Question proxy variables**
- 2 Compare outcomes across relevant groups**
- 3 Review false positives and negatives**
- 4 Change process, not only the prompt**

Human accountability remains visible at every layer.

Transparency and explainability

Employees need to know when AI is used and how to seek help.

Design question • What evidence would make this safe enough for HR work?

Security and prompt injection

An agent can be manipulated through the text it reads.

01

Treat retrieved content as untrusted

02

Separate instructions from data

03

Allow-list tools and destinations

04

Monitor anomalous actions

Agent identity and least privilege

Every action should be attributable to an authorised identity.

**Use named service or
user context**

**Every action should be
attributable to an authorised
identity.**

**Grant only required
permissions**

**Separate maker,
approver and operator
roles**

**Review access and
dormant agents**

Operational controls

Agents are digital workers that need owners, logs, limits and retirement.

1 Named business and technical owners

2 Versioned instructions and knowledge

3 Run-time monitoring and kill switch

4 Periodic validation and decommissioning

Human accountability remains visible at every layer.

Success measures

Measure service, adoption, quality, risk and human value together.

Design question • What evidence would make this safe enough for HR work?

Change and AI literacy

Adoption depends on role clarity and practical learning.

01

Explain what changes and what does not

02

Train prompting, review and escalation

03

Create champions and feedback loops

04

Recognise new work: agent owner, tester, steward

Build HR's AI capability

HR needs literacy, ethical judgement, product thinking and change leadership to operate AI well.

- 1 Teach AI capabilities, limitations and evidence review**
- 2 Establish privacy, fairness and responsible-use guidelines**
- 3 Create cross-functional teams for design and sustainment**
- 4 Communicate role changes and build continuous learning into work**

Human accountability remains visible at every layer.

90-day responsible roadmap

Move from a bounded pilot to an owned capability through evidence gates.

- 1 Days 1–30: baseline, risk and prototype**
- 2 Days 31–60: test, controls and user feedback**
- 3 Days 61–90: measured pilot and operating handover**
- 4 Scale only when value and control thresholds pass**

Human accountability remains visible at every layer.

Activity 10: Use AI for Workforce Wellness Insights

Use Copilot to analyse aggregated wellness evidence, identify organisational questions and prepare human-led interventions.

CASE

HarbourLight has pulse surveys, absence patterns and workload data, but HR spends days combining them. Leaders want early signals without monitoring or diagnosing individuals.

TOOLS

- Excel with Microsoft 365 Copilot
- Teams
- Word

OUTPUTS

- Aggregated wellness dashboard brief
- Evidence-and-limitation log
- Human-led intervention proposal

GUARDRAILS

- Aggregate and minimise personal data
- No diagnosis or individual risk scoring
- Employees have a clear human support route

Detailed procedure, prompts and evidence checklist: Learner Guide + activity folder

Activity 10 success map

Show your reasoning—not only a polished output.

INPUT

**Use the supplied
synthetic case
and approved
sources**

✓ reviewable

DECISION

**State
assumptions,
criteria and the
human owner**

✓ reviewable

EVIDENCE

**Save prompts,
output, checks,
revisions and
approvals**

✓ reviewable

QUALITY

**Pass the
acceptance
criteria and
answer reflection
questions**

✓ reviewable

Stop if the agent or Copilot output cannot be traced, corrected or safely escalated.

Activity 11: Automate Safe Employee Offboarding

Design a Copilot Studio offboarding agent and controlled flow that reduces follow-up while preserving separation of duties and respectful communication.

CASE

A synthetic employee is leaving HarbourLight. HR currently coordinates payroll, assets, access, knowledge transfer and exit communication through separate emails, creating missed tasks and security risk.

TOOLS

- Microsoft Copilot Studio
- Power Automate or agent flows
- Teams
- SharePoint
- HRIS sandbox

OUTPUTS

- Offboarding journey and RACI
- Tool and approval map
- Security, privacy and failure test report

GUARDRAILS

- Confirmed exit event before action
- Separate HR, payroll, asset and access approvals
- Knowledge and personal data retention are purpose-limited

Detailed procedure, prompts and evidence checklist: Learner Guide + activity folder

Activity 11 success map

Show your reasoning—not only a polished output.

INPUT

**Use the supplied
synthetic case
and approved
sources**

✓ reviewable

DECISION

**State
assumptions,
criteria and the
human owner**

✓ reviewable

EVIDENCE

**Save prompts,
output, checks,
revisions and
approvals**

✓ reviewable

QUALITY

**Pass the
acceptance
criteria and
answer reflection
questions**

✓ reviewable

Stop if the agent or Copilot output cannot be traced, corrected or safely escalated.

Activity 12: Capstone: Operate the HR Agent Control Room

Use lifecycle, service, risk, adoption and human-value evidence to govern the full HR AI operating system.

CASE

HarbourLight now uses generative AI and agents across talent planning, hiring, onboarding, development, policy, leave, benefits, wellness and offboarding. Leaders must decide what to scale, remediate, pause or retire.

TOOLS

- Excel
- Teams
- Microsoft 365 Copilot

OUTPUTS

- End-to-end HR AI service map
- Agent scorecard and incident response
- 90-day roadmap and executive recommendation

GUARDRAILS

- No scale without control thresholds
- Employee feedback included
- Named owner and retirement path

Detailed procedure, prompts and evidence checklist: Learner Guide + activity folder

Activity 12 success map

Show your reasoning—not only a polished output.

INPUT

**Use the supplied
synthetic case
and approved
sources**

✓ reviewable

DECISION

**State
assumptions,
criteria and the
human owner**

✓ reviewable

EVIDENCE

**Save prompts,
output, checks,
revisions and
approvals**

✓ reviewable

QUALITY

**Pass the
acceptance
criteria and
answer reflection
questions**

✓ reviewable

Stop if the agent or Copilot output cannot be traced, corrected or safely escalated.

Unit 4 integration

Connect concept, evidence and action

01 Key decision

Govern decisions, data, people and agent operations

02 Evidence

What would make the recommendation reviewable?

03 Human role

Who remains accountable?

04 Next move

What will you test or change?

A balanced HR AI scorecard

Speed is useful only when quality, trust and control remain healthy.

READ TOGETHER

A lower cycle time cannot compensate for weak evidence, falling trust or missing approvals. Pair one value metric with at least one quality and one risk guardrail.

HR lifecycle coverage

One operating system, many employee moments

01 Attract

Workforce planning, job design, recruitment and selection

02 Join

Onboarding, access, policy and manager connection

03 Grow

Performance, learning, mobility and engagement

04 Serve

Leave, benefits, payroll and employee relations

05 Exit

Offboarding, access, assets and knowledge transfer

06 Operate

Metrics, incidents, governance and retirement

The responsible-agent operating loop

Agents remain a managed organisational capability

01 1. Observe

Service, quality, adoption and risk signals

02 2. Review

Human owner inspects evidence and exceptions

03 3. Improve

Update knowledge, instructions, tools or process

04 4. Validate

Regression, fairness, security and user testing

05 5. Decide

Scale, remediate, pause or retire

Your 90-day pathway

Move through evidence gates

01 Days 1–30

Baseline • use-case boundary •
privacy/risk review • prototype

02 Days 31–60

Test • human controls • user
feedback • operating design

03 Days 61–90

Measured pilot • incident
rehearsal • scale decision •
handover

Key takeaways

Use AI to return HR capacity to people and strategy

01 Reduce administration

Remove repetitive search, drafting, rekeying and follow-up.

02 Improve productivity

Deliver faster, more consistent and evidence-led HR services.

03 Elevate HR value

Redirect saved time to workforce strategy, coaching and employee care.

04 Govern the change

Keep evidence, human authority, privacy and fairness visible.

Assessment reminder

Demonstrate your own competence

01 Written Assessment

60 minutes • K1–K5

02 Case Study Assessment

60 minutes • A1–A5

03 Before submission

Answer every part • check evidence • protect confidentiality

Assessment Flow

ON ASSESSMENT DAY

Digital Attendance (Mandatory)

TRAQOM · SSG DIGITAL ATTENDANCE

- It is mandatory to take the AM, PM and Assessment digital attendance for WSQ-funded courses.
- The trainer or administrator displays the digital-attendance QR code from the SSG portal.
- Scan the QR code with your mobile phone camera and submit your attendance.
- A minimum of 75% attendance is required to be eligible for assessment and funding.
